The present invention describes a compound (I) 8-50 nucleobases in length targeted to a nucleic acid molecule (II) encoding a natural dominant negative regulator of caspase 8, Filp-C, where (I) specifically of pridises with and inhibits expression of the protein of an active site on hybridises with at least an 8-nucleobase portion of an active site on (II). (I) has antinflammatory and anti-tumour activities. (I) is an inhibitor of Filp-C expression, a modulator of apoptosis and can be used inhibitor of Filp-C expression, a modulator of apoptosis and can be used of Filp-C in cells or tissues, and for treating an animal having a disease or condition associated with Filp-C. (I) is also useful for modulating apoptosis in a cell, where a caspase such as caspase 8, caspase 3 or caspase 7 is activated, and the Filp-C is the long form of Filp-C. (I) is also useful for diagnostics, therapeutics, prophylaxis, as research caspase and in antisense gene therapy. (I) is also useful compophylactically, e.g., to prevent or delay infection, inflammation or the present invaries represents human Filp-C as given in a caspase in a caspase or complylactically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      anti-apoptotic polypeptide which comprises a portion of an anti-apoptotic polypeptide which inhibits apoptosis of lymphocytes in combination with a transport group is described. The transport group is capable of transporting the chimaric group or fusion peptide across the cell membrane. The anti-apoptotic polypeptide is FLICE-like inhibitor protein (FLIP) which inhibits Ras and TWIR mediated apoptosis by inhibiting binding of Caspase-8 to the Fas receptor complex, thus shutting off the downstream Fas signalling pathway. The chimaric group and fusion peptide are useful for inhibiting ligand-induced apoptosis by bringing them into contact with T cells. The chimeric group is useful for expanding T cells in vitro e.g. T cells specific for particular antigens such as tumour-specific antigen, for enhancing T cells antigens and as tumour-specific antigen, for enhancing T cells e.g. activated CD4** T cells in MIV infected patients. The chimeric group is also useful for therapeutic, prophylactic or macromolecules such as anti-apoptotic polypeptides and nucleic acids encoding such as anti-apoptotic polypeptides and nucleic

                            This invention describes novel human and mouse anti-apoptotic gene products which contain at least one death effector domain. The products of the invention are used in the treatment of HIV infections and autoimmune diseases.

This sequence is the human CLARP protein. The invention relates to the human RICK (RIP-like interacting CLARP kinase) protein. The RICK the human RICK (RIP-like interacting CLARP kinase) protein acts as a positive regulator of apoptosis, protentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions, compositions of the various compositions, and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and county and yastegulation of apoptosis. Complexes containing RICK and molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8. Identification of ARC-like inhibitory compounds and be used to treat e.g. cancer, ALDS, neurodegenerative compositions of disoaces and in muscle tissue and cardiac disoaders. ALDS, neurodegenerative disoaces and cardiac disoaders. ALDS, neurodegenerative disoaces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the blochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates.
                                                                                                                                                                                                                                                                                                                                                                                    Compositions for identifying apoptosis signalling pathway inhibitors useful for treating diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  97.5%; Score 2412; DB 21; Length 480; 97.7%; Pred. apoptotic agents.

```
This is the amino acid sequence of human FLAME-1, or FADD-like apoptotic/anti-apoptotic molecule 1. FLAME-1 is a novel anti-apoptotic protein that interacts specifically with FADD, McM4, Mch5 and FLAME-2. It is recruited to the Fas receptor complex and can abrogate Fas/TNF-induced apoptosis upon expression in Fas/TNF-sensitive MCF-7 cells. Despite having a caspase domain-like region, it does not have caspase activity. The amino acid sequence of FLAME-1 was deduced from the nucleotide sequence (see AAV74136) of a Jurkat cell-derived cDNA clone. Host cells, recombinant vectors, and methods of using FLAME-1 to identify substrates, activators or inhibitors of FLAME-1 are provided. FLAME-1, FLAME-2 (see AM99108) and agonists can be used to inhibit apoptosis, e.g. for treating HIV infection or Alzheimer's disease. Inhibitors can be used as
                                                                                                                                                                                                                                                                              1.341

IsoId=015519-1; Sequence=Displayed;
Name=2; Synonyms=Filp-S, ClarRP2, MRIT beta-1, CASH beta;
IsoId=015519-2; Sequence=VSP_000828, VSP_000829;
Name=3; Synonyms=MRIT alpha-2;
IsoId=015519-3; Sequence=VSP_000824, VSP_000838;
Name=4: Synonyms=I-FLICE 2;
IsoId=015519-4; Sequence=VSP_000825;
Name=4: Synonyms=I-FLICE 3;
Name=4: Synonyms=I-FLICE 3; TISSUE SPECIFICITY: WIDELY EXPRESSED. HIGHER EXPRESSION IN
STELETAL MÜGGLE, PANCREAS, HEARY, KIDNEY, PLACENTA, AND PERIPHERAL
BLOOD LEUKCCYTES, ALSO DETECTED IN DIVERSE CELL LINES. ISOFORM 8
IS PREDOMINANTLY EXPRESSED IN TESTIS AND SKELETAL MUSCLE.
INDUCTION: REPRESSED BY IL-2 AFFER TOR STIMULATION, DURING
PROGRESSION TO THE S-PHASE OF THE CELL CYCLE.
DOMAIN: THE CASPASE DOMAIN LACKS THE ACTIVE SITES RESIDUES FASTMEDIATED TO THE TOTAL THE CONTROL OF THE CONTRO APOPTOSIS OR TO REDUCE THERSE-TRIGGERED APOPTOSIS. LACKS ENZYMATIC (CASPASE) ACTIVITY. SUBUNIT: THERSF6 STIMULATION TRIGGERS RECRUITMENT TO THE DEATH-INDUCING SIGNALING COMPLEX (DISC) FORMED BY THERSF6, FADD AND CASPASE-B. A PROTECLYTIC FRAGMENT (P43) STAYS ASSOCIATED WITH THE DISC. ALSO INTERACTS WITH CASPASE-10, CASPASE-3, TRAF1, TRAF2 AND BCL-X(L) (IN VITRO). INVOLVED IN CATALYSIS.
--- PTM: PROTEOLYTICALLY PROCESSED; PROBABLY BY CASPASE-8. PROCESSING LIKELY OCCURS AT THE DISC, GENERATES SUBUNIT P43 AND P12.
--- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C14.
--- SIMILARITY: Contains 2 death effector (DED) domains.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protectlytic fragments of the W-terminal properties (termed CAP3, CAP5 and CAP6) are likely retained in the DISC. Cleaves and activates CASP3, CASP4, CASP7, CASP9 and CASP10. May participate in the GZMB apoptotic pathways. Cleaves ADPRT. Hydrolyzes the small-molecule substrate, Ac-Asp-Glu-Val-Asp-I-AMC. Likely target for the cowpox virus CRWA death inhibitory protein. ENRYME REGULATION: Inhibited by Z-VAD-FK, Crma and P35.
SUBUNIT: Heterodimer of a 18 kba (P18) and a 10 kba (P10) subunit. Interacts with FADD and CFLAR (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Highest expression in spleen, thymus, lung, liver and kidney. Lower expression in heart, brain, testis and skeletal muscle. DEVELOPMENTAL STAGE: In the embryo, highest expression occurs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         death-Inducing signaling complex (DISC), whereas additional processing is likely due to the autocatalytic activity of the activated process. GzMB and CASP10 can be involved in these processing events (By similarity).

SIMILARITY: BELONGS TO PEPTIDASE FAMILY C14.
SIMILARITY: Contains 2 death effector (DED) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Generation of the subunits requires association with the

RT Mature 419:395-399(2002).

Caspases responsible for the TWRSP6/FAS mediated and TWRSP6/IA mature 419:395-399(2002).

Caspases responsible for the TWRSP6/FAS mediated and TWRSP6/IA moduced cell death. Binding to the adapter molecule FADD recruits it to either receptor. The resulting aggrapate called death-induced complex (DISC) performs CASPB proteclytic fragments (DISC) performs CASPB proteclytic fragments of the N-terminal propeptide (termed CAP) activate downstream apoptotic proteases.

Cativation. The activate downstream apoptotic proteases.

Proteclytic fragments of the N-terminal propeptide (termed CAPS) activates CASPB, CASPP, CASP Ng F.W.H., Nguyen M., Kwan T., Branton P.E., Nicholson D.W., Cromlish J.A., Shore G.C.; "p28 Bap21, a Bcl-2/Bcl-XL- and procaspase-8-associated protein in the endoplasmic reticulum."; MEDLINE-99451259; PubMed-10508784; Blanchard H., Kodandapan L., Mittl P.R.E., Di Marco S., Krebs J.F., Wu J.C., Tomaselli K.J., Gruetter M.G.; Tomaselli K.J., Structter M.G.; The three-dimensional structure of caspase-8: an initiator enzyme in "Dominant expression of a novel splice variant of caspase-8 in human peripheral blood lymphocytes."; Biochem. Name=C; Synonyms=10-C;
ISOId=092851-3; Sequence=VSP_000821, VSP_000822;
-1- TISSUE SPECIFICITY: DETECTABLE IN MOST TISSUES. LOWEST EXPRESSION
IS SEEN IN BRAIN, KIDNEY, PROSTATE, TESTIS, AND COLON.
-1- PTM: CLEAVAGE BY GRANZYME B AND AUTOCATALYTIC ACTIVITY GENERATE
THE TWO ACTIVE SUBUNITS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 - FUNCTION: INVOLVED IN THE ACTIVATION CASCADE OF CASPASES
RESPONSIBLE FOR APOPTOSIS EXECUTION. RECRUITED TO BOTH FAS- AND
TWRR-1 RECEPTORS IN A FADD DEPENDENT WANNER. WAY PARTICIPATE IN
THE GRANZYME B APOPTOTIC PATHWAYS. CLEAVES AND ATIVATES CASPASE-
3, -4, -6, -7, -8, AND -9, HYDROLYZES THE SWALL- MOLECULE
SUBSTRATES, TYR-VAL-ALA-ASP-|-AMC AND ASP-GLU-VAL-ASP-|-AMC.
-!-FUNCTION: ISOPONME C IS PROTEOLYTICALLY INACTIVE.
-!-SUBULT: HETERODIMER OF A 23/17 kDa (P23/17) DEPENDING ON THE
SPLICING EVENTS AND A 12 kDa (P12) SUBUNIT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hadano S., Yanagisawa Y., Skaug J., Fichter K., Nasir J.,

"Cleavage of sterol regulatory element binding proteins (SREBPS) by
"Cleavage of sterol regulatory element binding proteins (SREBPS) by
EMBO J. 15:1012-1020(1996).

-I FUNCTION: INVOLVED IN THE ACTIVATION CASCADE OF CASPASES
RESPONSIBLE FOR APOPTOSIS EXECUTION. AT THE OWNET OF APOPTOSIS IT
PROTEOLYTICALLY CLEAVES POLY(ADP-RIBOSE) POLYMERASE (PARP) AT A
216-ASP-I-GLY-217 BOND. CLEAVES AND ACTIVATES STEROL REGULATORY
ELEMENT BINDING PROTEINS (SREBPS) BETWEEN THE BASIC HELIX-LOOP-
HELIX LEUCINE ZIPPER DOMAIN AND THE MEMBRANE ATTACHMENT DOMAIN.
CLEAVES AND ACTIVATES CASPASE 6, -7 AND -9 (BY SIMILARITY).

-1- SUBUNIT: HETERODIMBER OF A 17 KDB (P17) AND A 12 KDB (P12) SUBUNIT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            KSIQESEAFLPQSIPEERYKMKSKPLGICLIID------CIGNETEL--LRDTF

CLEAVES AND ACTIVATES CASPASE-6, -7 AND -9 (BY SIMILARITY).

-- SIBUNIT: HETERODIMER OF A 17 kDa (P17) AND A 12 kDa (P12) SUBUNIT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TWO ACTIVE SUBURITS. ADDITIONAL PROCESSING OF THE PROPERTIDES IS LIKELY DUE TO THE AUTOCATALYTIC ACTIVITY OF THE ACTIVATED PROTEASE. ACTIVE HETERODIMERS BETWEEN THE SMALL SUBURIT OF CASPASE-7 PROTEASE AND THE LARGE SUBURIT OF CPP32 ALSO OCCUR AND VICE VERSA (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                       Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,
Mammalia, Eutheria, Rodentia, Sciurognathi, Muridae, Murinae, Rattus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (BY SIMILARITY).

-1- SUBCELLULAR LOCATION: Cytoplasmic.

-1- TISSUE SPECIFICITY: EXPRESSED IN HEART, BRAIN, LIVER, AND MUSCLE BUT NOT IN KIDNEY OR TESTIS.

-1- DEVELOPMENTAL STAGE: HIGHLY EXPRESSED IN NEURON-ENRICHED RECIONS OF THE DEVELOPING BRAIN, BUT DOWN-REGULATED TO LOW LEVELS IN THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ni B., Wu X., Du Y., Su Y., Hamilton-Byrd E., Rockey P.K.,

TISSUE SPECIFICITY: HIGH LEVEL EXPRESSION SEEN IN THE EMBRYONIC CNS, LIVER, LUNG, KIDNEY, SMALL INTESTINE, AND HARR FOLLICLES OF VIBRISSAE. MODERATE EXPRESSION SEEN IN THE SKIN, ORAL MUCCSA, SKELETAL MUSCLE, SUBMANDIBULAR GLAND AND THYMGS. IN THE ADULT, IT IS HIGHLY EXPRESSED IN SPLEEN, LOW LEVELS IN THE THYMGS. IN THE ABOULT, LONG AND KIDNEY. MODERATELY IN THE MUSCLE, OVARY AND GUT.

DEVELOPMENTAL STAGE: DURING EMBRYONIC DEVELOPMENT IS HIGHLY EXPRESSED IN SEVERAL TYPES OF MOUSE TISSUE UNDERGOING HIGH RATES OF PROGRAMMED CELL DEATH SUCH AS CENTRAL NERVOUS SYSTEM AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PTM: THE MATURE PROTEASE CAN PROCESS ITS OWN PROPERTIDE, BUT NOT THAT OF OTHER CASPASES (BY SIMILARITY).
SIMILARITY: BELONGS TO PEPTIDASE FAMILY C14.
SIMILARITY: Contains I CARD domain.

                                                                                                                                                                                                                                                                                                                              Sequence 2, Application US/08859167
Patent No. 6037461
GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
APPLICANT: Farnandez-Alnemri, Teresa
TITLE OF INVENTION: FADD-LIKE ANTI-APOPTOTIC MOLECULES, METHODS OF TITLE OF INVENTION: Of MAKING THE SAME, AND COMPOSITIONS FOR AND METHODS TITLE OF INVENTION: Of MAKING THE SAME
NUMBER OF SEQUENCES: 17
CORRESPONDENCES: ADDRESSES:
ADDRESSEE: Woodcock, Washburn, Kurtz, Mackiewicz & No. 6037461ris
STREET: One Liberty Place, 46th floor

Factor No. 6576751

GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
TITLE OF INVENTION: Radd-Like Anti-Apoptotic Molecules, Methods Of U TITLE OF INVENTION: Compositions For And Methods Of Making The Same; FILE REFERENCE: TUJ2445

CURRENT APPLICATION NUMBER: US/09/723,450

CURRENT FILING DATE: 2000-11-28

PRIOR APPLICATION NUMBER: 09/276,993

PRIOR APPLICATION NUMBER: 08/859,167

PRIOR FILING DATE: 1997-05-20

NUMBER OF SEQ ID NOS: 17

SOFTWARE: Patentin Version 3.0

Patent No. 6399327
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: David WALLACH
APPLICANT: Tanya M. GONCHAROV
TITLE OF INVENTION: MODILATORS OF THE FUNCTION OF FAS RECEPTORS
TITLE OF INVENTION: AND OTHER PROTEINS
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
ADDRESSEE: Browdy and Neimark
STREET: 419 Seventh Street N.W., Ste. 300
CITY: Washington
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 84;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
